

RHUL Plans for Moriond'13

Ian Connelly, Josh Thomas-Wilsker,
Ricardo Gonalo

Royal Holloway
University of London

- People:
 - PhD Students (100%):
 - Josh Thomas-Wilsker
 - Ian Connelly
 - Research Assistant: Ricardo Gonalo – 80%
 - Academics: Pedro Teixeira-Dias, Glen Cowan
- Involvement:
 - Ian & Josh with help & guidance from Ricardo:
 - Participated in VH cut-flow challenge
 - Working 100% on 2012 top b-tagging calibration : **urgent** for all H->bb
 - Come back to analysis work once top calibration is on solid footing
 - Ricardo:
 - Edit ttH note & act as trigger contact – until a willing replacement is found 😊
 - Concentrate on organizing ttH – focus on dilepton if it still looks feasible
 - Currently less people than single lepton – needs more attention to make it to Moriond
 - All:
 - Plan is to ramp up analysis machinery to make VH studies as needed
 - In practice: RootCore-based package as used for cut-flow challenge
 - The available time probably won't allow a big direct contribution to analysis, so highest priority is getting top b-tagging in place
