

H->bb Weekly Meeting

Ricardo Gonalo (RHUL)
HSG5 H->bb weekly meeting, 20 September 2011

News! News! News!

- Peak stable lumi
 $3.31 \times 10^{33} \text{ cm}^{-2} \text{ s}^{-1}$
- 3.12 fb^{-1} with stable beams
collected so far
- Peak pileup increased from
around 12 to 21; new average
around 15 events/crossing

Issues...

- Hadronic calibration workshop just started
 - Many issues to be discussed this week – will summarize in next week's meeting
 - Local hadronic calibration (rel.17) should benefit our di-jet mass resolution
 - Agenda at:
<https://indico.cern.ch/conferenceOtherViews.py?view=standard&confId=132005>
- Just came back online and only starting to read email, so are there any urgent issues?
